### **Major Hazards and Risks:**

**SNAGS**-Stay out of area, essential fire line personnel only, look at root system before working/parking. IRPG pg. 20.

**Complacency:** Remember Situation Awareness Keep focus on objectives, communication, previous fire behavior, weather forecast local factors.

**DRIVING**- Drive defensively. Backing accidents are common with this type incident. Use spotters when backing and blow your horn to alert personnel of your actions. Use headlights on dusty roads. Run lights when necessary.

**Personal Hygiene**- Practicing good hygiene will prevent the spread of illness and disease. Washing stations will be set up at various places at the staging area. Use them before eating, and after visits to the rest room.

**FIRE BEHAVIOR** – Maintain situational awareness, follow 10 Standard Orders, recognize / mitigate the 18 Watch Out Situations, and apply LCES. Know the fire weather forecast. Monitor conditions for change.

**HYDRATION/HEAT STRESS** – Were looking at **Heat Indexes of 115-120 in the bays**. **Be sure to drink plenty of fluids (before you get thirsty), and take frequent breaks. Watch your co-workers for heat related symptoms.**

**ENVIRONMENTAL HAZARDS** – Watch for and stay away from rattlesnakes, fire ants and wildlife. Keep all foods secured. Bring all trash off the line. Use insect repellent for ticks. Report tick bites to Safety Officer.

**General Fire Behavior**

Currently smoldering ground fire has been observed along with active burning in the litter and flare-ups in the shrubs that have been cured by the ground fire heat. These areas flare up and then die back down. The fire has burned actively in green and cured fuels. Torching has been observed with some short range spotting. Watch for needle/leaf cast on ALL divisions which will provide surface fuels for smoldering or active ground fire.

**Specific Fire Behavior**

Organic soils continue to dry and the ground fire continues to spread in the bays. Reburn in needle cast is still causing active surface fire. Expect continued smoldering and active fire in the organic soils. Ground fire will be the ignition source for cured and green fuels to burn/reburn and cause torching and spotting. Expect reburn in areas with heavy needle cast and smoldering ground fire.

**Controllability-** Indirect attack should be used if fires become established. Aircraft should always be utilized in the containment effort. Direct attack with heavy equipment in the sand ridges can be accomplished if winds are not gusting.
